SUMMARY

Computer Science Engineering student with expertise in Java, Spring Boot, Python, React, SQL, and distributed systems. Experienced in designing scalable backend services, fault-tolerant distributed architectures, AI-powered solutions, and modern full-stack applications.

SKILLS

Languages: Java,C,Python,SQL

Databases/cloud: MySQL,MongoDB,PostgreSQL,ChromaDB,FAISS

Fronend: React, TypeScript, TanStack Router, Tailwind CSS, HTML, CSS, D3.js

Backend & Frameworks: Spring Boot, Spring MVC, REST APIs, gRPC, Protocol Buffers, Node.js

Tools & DevOps: Git, Maven, Docker, Prometheus, Grafana

PROJECTS

Distributed Fault-Tolerant Key-Value Store using the Raft Consensus Algorithm

- Designed and developed a fault-tolerant distributed key-value store using the Raft consensus algorithm with leader election, log replication, and automatic failover to ensure strong data consistency.
- Implemented persistent storage using RocksDB, gRPC-based inter-node communication, snapshotting, and crash recovery for reliable distributed operations.
- Architected an interactive React dashboard to visualize cluster topology, leader/follower states, log replication, node health, and consensus events in real time.
- Containerized a multi-node cluster with Docker and integrated Prometheus and Grafana for performance monitoring, metrics collection, and fault analysis.

Twinos – AI-Powered Career Digital Twin & Skill Intelligence Platform

- Engineered an AI-powered Career Digital Twin platform that analyzes resumes, GitHub, and LeetCode profiles to generate personalized career insights and readiness scores.
- Established a **RAG-based recommendation engine** for evidence-based skill validation, career matching, skill-gap analysis, and learning roadmaps.
- Developed RESTful APIs with **Spring Boot** and **MySQL** for resume parsing, profile management, and real-time career intelligence.

Context-Based File System Search Tool

- Deployed a semantic file search system that retrieves documents based on **contextual meaning instead of exact filenames**, improving search accuracy and user experience.
- Integrated vector similarity search using **FAISS and Sentence Transformers** to generate embeddings and enable fast, context-based document retrieval.
- Constructedd a scalable indexing pipeline to efficiently process, store, and search large volumes of unstructured local files.

EDUCATION

Dayananda Sagar University

Bachelor of Technology in Computer Science Engineering

Sep 2023 – Ongoing 2027 | Bangalore

Gitam Junior College

MPC-Mathematics, Physics, Chemistry

Jun 2022 – Apr 2023 | Tirupathi
